

# RLADIES : HYPOTHESIS TESTING

JUNE 2018

# WHAT IS A HYPOTHESIS?

A **hypothesis** is a proposed explanation for a phenomenon. For a hypothesis to be a scientific hypothesis, the scientific method requires that one can test it.\*

# A NULL HYPOTHESIS

Null hypothesis is a general statement or default position that there is no relationship between two measured phenomena, or no association among groups.\*

# WHAT WE CAN WE DO WITH A NULL HYPOTHESIS

		Conclusion about null hypothesis from statistical test	
		Accept Null	Reject Null
Truth about null hypothesis in population	True	<b>Correct</b>	<b>Type I error</b> Observe difference when none exists
	False	<b>Type II error</b> Fail to observe difference when one exists	<b>Correct</b>

# ERROR TYPE I REDUCTION AS THE GOAL

Ideally, we should decrease both types of errors but since the Error Type I is more serious, we try to reduce it by choosing a significance level (Alpha) and reduce Error Type II by increasing our sample size.

# WHAT IS A P-VALUE ?

p-value Is the probability for a given statistical model that, when the null hypothesis is true, the statistical summary would be the same as or of greater magnitude than the actual observed results.\*

# SAMPLING DISTRIBUTION AND CLT

Go to R !

# WHAT IS STATISTICAL SIGNIFICANCE?

Statistical significance refers to the likelihood or probability that a statistic derived from a sample represent some genuine phenomenon in the population from which the sample was selected.\*

# STATISTICAL SIGNIFICANCE : A DEEPER LOOK

- Statistical significance Vs. Practical Significance
- Effect Size
- Confidence Interval

# A GENERAL METHOD TO CALCULATE P-VALUE

Getting something  
 $P(\text{by chance and not any specific reason})$

## SOME OF THE SCENARIOS WE FACE

- Is a sample coming from a specific population?
- Are two seemingly different samples belong to the same population?
- Does the same sample (or two samples related together) in different situations have different statistics?

# Z-SCORE AND Z-TEST

$$Z = \frac{X - \bar{X}}{S}$$

Standard Normal Probabilities

Table entry for  $z$  is the area under the standard normal curve to the left of  $z$ .

# T-STATISTICS AND T-TEST

$$t = \frac{|\bar{X} - \mu|}{s / \sqrt{n}}$$

**The t-Table**

Numbers in each row of the table are values on a t-distribution with (df) degrees of freedom for selected right-tail (greater-than) probabilities (p).

df \ p	0.40	0.25	0.10	0.05	0.025	0.01	0.005	0.0005

# INDEPENDENT T-TEST

$$t = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{\frac{s_p^2}{n_1} + \frac{s_p^2}{n_2}}}$$

# PAIRED T-TEST

$$t = \frac{\overline{x_1} - \overline{x_2}}{\sqrt{\frac{[(n_1 - 1)s_1^2 + (n_2 - 1)s_2^2]}{(n_1 + n_2 - 2)} \left( \frac{n_1 + n_2}{n_1 n_2} \right)}}$$

# ANOVA

$$v_r = \frac{\sum_{i=1}^{\mathcal{K}} \sum_{j=1}^n x^2 - \frac{\sum_{i=1}^{\mathcal{K}} \left( \sum_{j=1}^n x \right)^2}{n} - \frac{Sg}{k} + \frac{\left( \sum_{i=1}^{\mathcal{K}} \sum_{j=1}^n x \right)^2}{\mathcal{N}}}{(\mathcal{N} - 1) - (k - 1) - (n - 1)}$$
